

iOrdering System

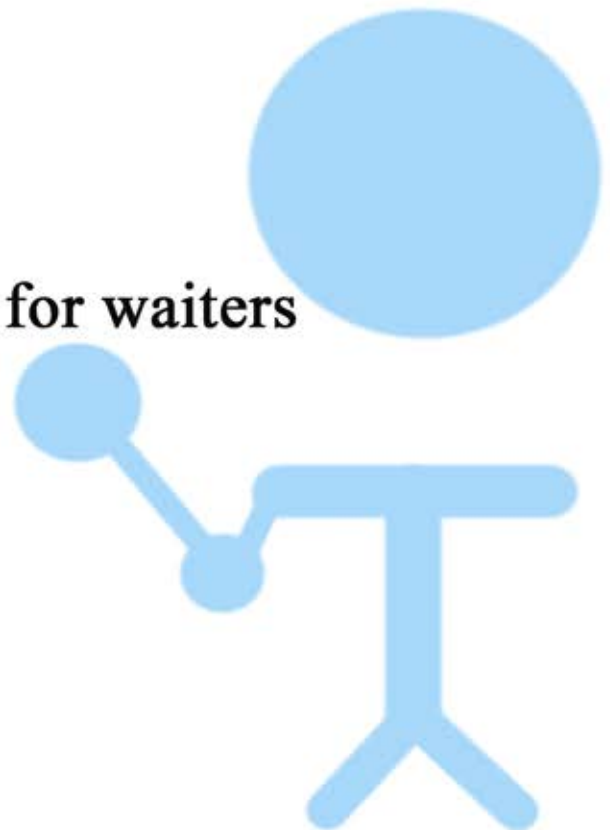

This system is a replacement for classic paper waiter pads which they use for taking orders.

iPOS integrated with iOrdering system to enhance operation efficiency.

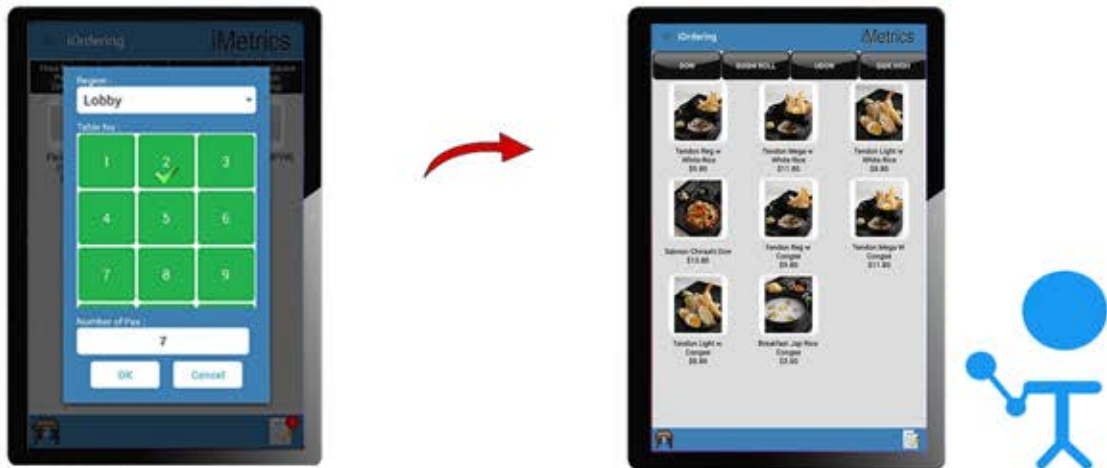

iOrdering allow waiter to take order using mobile device and send the order of certain table location directly to kitchen to initiate prepare process.

iOrdering is an application for waiters and restaurant.

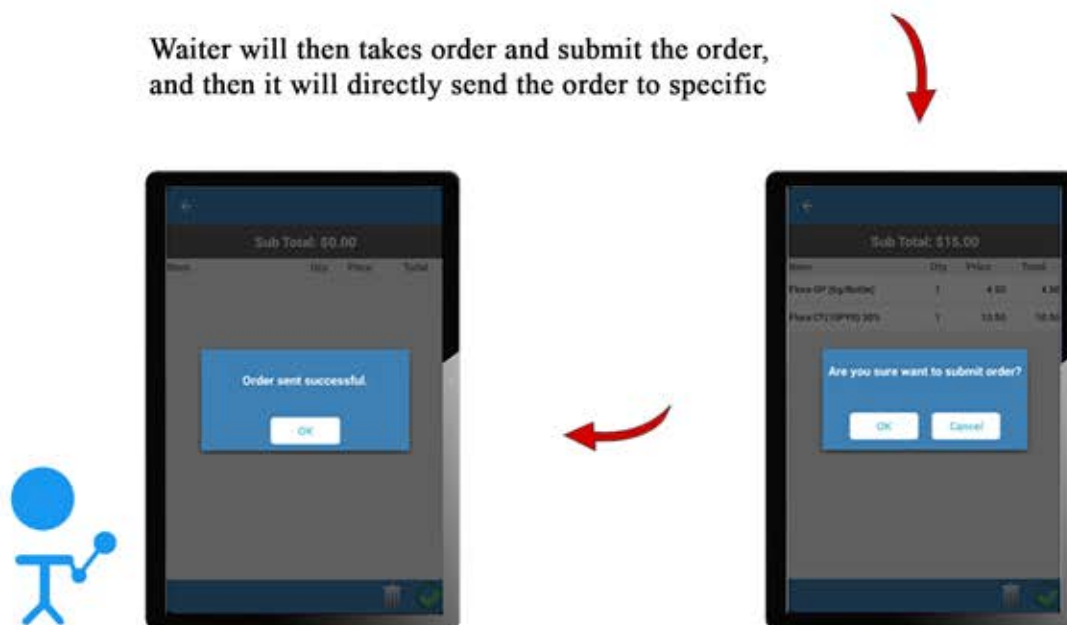

iOrdering System

Waiter takes order using mobile devices by selecting table location and their orders. Table which currently occupied will be highlighted.

Waiter will then takes order and submit the order, and then it will directly send the order to specific

Kitchen crews will prepare the order accordingly and deliver it to customer base on order chit.

Benefits

Accuracy:

With this system, orders from customer will be more accurate instead of using the classic way of communication such as verbally or through a piece of paper order.

Improved customer service:

By using this iOrdering system, waiter don't need to going back and forth from kitchen to tables just to sending order to kitchen hence will reduce service time. Waiter can also add/amend order from iOrdering system directly upon customer request and this information will passed to kitchen immediately.
